

212/863

In the claims:

Claims 1-41 (canceled)

42. (previously presented) A method of dilating a cervical canal, comprising:

inserting a dilating device into the cervical canal, the dilating device comprising an elongated member, a first expandable component attached to a distal end of the elongated member, and a second expandable component attached to the elongated member proximally of the first expandable component, wherein the second expandable component has an uneven outer surface;

expanding the first expandable component;

retracting the dilating device until resistance is felt while the first expandable component is expanded; and

expanding the second expandable component in the cervical canal after retracting.

43. (Original) The method of Claim 42, wherein the device further comprises an expansion mechanism coupled to the first and second expandable components.

44. (Original) The method of Claim 42, wherein the first and second expandable components are expanded using a fluid-filled syringe coupled to the first and second expandable components.

45. (Original) The method of Claim 42, wherein the first and second expandable components are expanded using a gas-filled syringe coupled to the first and second expandable components.

212/863

46.(Original) The method of Claim 42, wherein the first and second expandable components are rigid-walled balloons.

Claims 47-54 (canceled)
